CONSTRUCT IRAQ BY THE NUMBERS

Number of editions organized:	5
Total exhibition space:	17.000 sq. m
Number of exhibitors in 2022 edition:	205
The origin of the exhibitors in 2022 exhibition:	UAE, China, Egypt, India, Iran, Iraq, Türkiye
Number of International Visitors:	767
Total Number of Visitors:	7889
Expected number of exhibitors in 2023 edition:	300 Exhibitors

WHY CONSTRUCT IRAQ

- The only exhibition in Iraq where international companies participate.
- The most comprehensive construction industry exhibition in Iraq.
- It is organized with the participation of Iraqi authorities and state companies in addition to the biggest companies in the region.
- Time efficient services like stand construction, freight and accommodation are provided by the organizer.

IRAQ CONSTRUCTION INDUSTRY

The local manufacturing of building materials is insufficient, the materials are being provided by import.

The main supplier countries of cement are Turkey and Iran.

In the Ceramic Industry Spain and Turkey's products are preferred, whereas in sanitary wares;

Egypt, UAE, and Turkey's products are most sought after.

Apart from Turkish products, products from Italy, Greece, China and Pakistan are also generally available.

Iraq is in need of the construction of nearly 2 million new houses.

The total length of Iraq's highways is 42,000 km, 85% of which are asphalt roads. According to the Ministry of Transport, a total amount of \$ 40 billion in investment is required for the renewal of the transport infrastructure and the elimination of deficiencies.

It is planned that the Arabian Gulf will serve as a docking station for ships coming from

China and have their goods exported to Europe via Turkey.

ENERGY AND POWER

It is planned to construct new power plants (various types) with a capacity of 9.200 MW in Iraq. Iraq currently generates about 8,000 MW of electricity yet it needs 14,000 to 15,000 MW (However it is predicted that the need would rise to up to 22,000 MW if industrial plants and other investment projects come into operation.) According to another assessment, the country's need of electricity will be 23,000 MW by the year 2030. Approximately 7.6 hours of electricity can be supplied from the public network to homes. The average use of electricity with special facilities (generators) is up to 15-16 hours. However the average usage goes up to 19 hours in Basra and 18 hours in Muthanna. This includes Ministry projects, as well as power generation, next to transmission and distribution projects. Global giants such as GE, Siemens, Alstom, as well as companies from China, Turkey and Iran have undertaken the construction of power plants in Iraq.

STANDARD STAND

Between 9-15 sq. m

• 1 table, 4 chairs

• 1 counter

Between 18-24 sq. m

• 2 tables, 8 chairs

• 2 counter

30 sq. m and plus

• 3 tables, 12 chairs

• 3 counter
